Increasing Shoreline Armoring

[HOME](#)[NEWS](#)[WEATHER](#)[ARTS & CULTURE](#)[MUSIC](#)[EVENTS](#)[SH](#)

In 2007, the Concordia University Wisconsin, in Mequon, Wis., finished fortifying a 130-foot bluff and building a 2,700-foot-long rock wall to buffer waves. The \$12 million project was among the largest built along Lake Michigan in Wisconsin. Neighboring landowners soon noticed changes to their property. The project has accelerated erosion on downstream properties from around 9 inches to more than 7 feet per year. Coburn Dukehart / Wisconsin Watch

15 years later, Wisconsin university's massive Lake Michigan seawall frustrates downstream neighbors

Nature-Based Shoreline Options for the Great Lakes Coasts

Free Download

Category: Coastal Engineering

DESCRIPTION

This guide describes different types of nature-based shoreline techniques and case studies suitable for the Great Lakes. Includes a glossary of coastal terminology. 52 pages.

<https://publications.aqua.wisc.edu/product/nature-based-shoreline-options-for-the-great-lakes-coasts/>

NBS Techniques Summary

Vegetation

Native vegetation planted on the shore to reinforce sediments with its roots, dissipate wave energy and slow erosive runoff and wind.

Nourishment

The placement of clean sediment, often sand, on beaches, dunes or in nearshore waters to replace lost sand or build dunes.

Slope Stabilization

Regrading or reinforcing an eroding or failing bluff, bank or dune to a stable slope to allow vegetation to establish.

Edging

The placement of coir logs, wood or stones at the toe, or base, of the shoreline to prevent erosion and allow vegetation to establish.

Sill

A low-profile structure located in the water just off the shoreline to dissipate wave energy and create an area of protected natural marsh.

Ecologically Enhanced Hard Armoring

Vegetation, textured surfaces or other features added to conventional hard armoring structures to provide habitat and other benefits.

Hard Armoring

Rock, concrete or steel structures placed along the shoreline to slow erosion such as revetments, seawalls, groins and breakwaters.

Case Study
Samuel Myers Park
Racine, Wisconsin

Capt. Dennis Carr

Sam Myers Storymap

6 West Sand Dune

With the assistance of the Great Lakes Community Conservation Corps, approximately 20,000 dune grass plants were planted on the west dune. It took about three years for these grasses to fully establish.

06 / 12 Maintenance for the sand dune includes invasive species management such as Blue Dune Lyme Grass, Spotted Knapweed, Black Locust, and other common weeds.

Sam Myers Storymap

8 West Wetland

The majority of stormwater runoff that is not captured by other infrastructure on site drains to this location. This constructed wetland can hold 200,000 gallons of water during a storm event. The wetland mimics a naturally occurring interdunal wetland and is groundwater fed.

Over 90 species of plants can be found in the constructed wetlands and they bloom throughout the year. More than 236 species of birds have been observed at Sam Myers in addition to painted turtles, Blanding's turtles

9 Dry Prairie

This area of the Park is planted with dry environment, prairie species. The dry prairie helps to infiltrate stormwater.

The area was first planted by volunteers and the Great Lakes Community Conservation Corps in 2015. It takes approximately 3 years for the plants to establish. Since the initial planting, vegetation has naturally recruited in this zone.

Dredged spoils from the yacht club were

Sam Myers Storymap

4 Storm Damage

A storm event in January of 2020 caused damage to the Park. A combination of strong, easterly winds, storm surges, near-record high water levels, and low ice coverage caused 15-foot waves to overtop the breakwater and flood the parking lot and embayed area of the Park.

The storm displaced stones up to four tons in size from the breakwater, filled in the eastern wetland with sediment and covered the footbridge, eroded a large dune on the eastern side of the Park, and

Issue with FEMA Disaster Declaration – Is natural infrastructure “infrastructure”?
