

The EWN Compass

A Nature-based Solution Implementation Toolbox

Explore the types of projects implemented in your region

The screenshot displays the EWN Compass interface. On the left, a sidebar lists project categories: Reefs - MacDill Reef..., Wetlands - Savanna..., Levee Setback - Mis..., Navigation - Middle..., Island Restoration - ..., and Urban Park Restorat... The main area shows a map of the United States with various project locations marked by colored dots. A detailed view of a project in the Northern Rockies and Plains region is shown, featuring a table of Inland US NNBF Options and Potential Outcomes.

Inland US NNBF Options	Potential Outcomes
Inland freshwater wetland restoration	Water quality improvements, stormwater management improvements, habitat creation/restoration, improved aesthetics
Environmental enhancement of existing infrastructure	Habitat restoration/creation and resiliency
	Habitat creation/restoration, floodplain reconnection, wetland creation,

Key Features:

- A structured framework to identify NNBF relevant to specific environmental conditions.
- A curated collection of case studies to demonstrate successful applications.
- Practical tools for early-stage project planning, design integration, and feasibility assessment.
- Support for compliance with Section 1184 of the Water Resources Development Act (WRDA) of 2016 by streamlining documentation and reporting.
